Int. J. Numer. Meth. Fluids 2005; **47**:1491–1494

KEY WORD INDEX

3D incompressible flow, 1157

Acoustics, 849
Adaptive grids, 1329
Adaptive mesh refinement, 367
Adaptive particle distribution, 1403
ADI method, 161
Adiabatic, 1205
Adifor, 939
Adjoint, 995
Adjoint equation, 987
Adjoint error estimation, 1069
Adjoint problem, 45, 1027
Aerodynamics, 721
Algebraic Reynolds stress model, 1431
Algorithm, 1205
Algorithmic differentiation, 1315
Alternating direction implicit (ADI), 1213, 1469
Anisotropic, 1213
A posteriori error estimation, 45, 773
Arbitrary Lagrangian–Eulerian (ALE), 693, 887, 1375
Arterial bypass optimization, 1411
Automatic differentiation, 939

Backward-facing step, 1101
Bent tube, 1431
BiGlobal, 1229
Block-structured, 1261
Blood flow simulations, 803
Boundary conditions, 99, 603, 987, 1451
Boundary element method (BEM), 19, 1423
Boundary fitted co-ordinate system, 1431
Boundary integral formulation, 1423
Boundary value problems, 1035
Bubble cluster, 591

Carbuncle phenomenon, 903
Cartesian-grid method, 979
CFD, 939
Channel, 1229
Channel flow, 925
Chaotic advection, 871
Chemical turbulence, 879
CIP, 655
Combustion instabilities, 849
Compressible Euler flows, 833
Compressible flows, 271, 971, 1197
Compressible Navier–Stokes equations, 1423
Compressible two-fluid flow, 1337
Computational haemodynamics, 603
Conservation, 1337, 1361
Conservation laws, 1035, 1061
Conservation properties, 817
Consistency, 1403
Constricted, 1229
Continuity equation, 19
Continuous remap, 833
Control theory, 201
Control volume finite element method, 1181
Convection–diffusion, 1307
Core spreading, 387, 841
Cross-diffusion, 325
Curvilinear mesh, 1061
Cut cells, 1269
Cylinder, 75

Data assimilation, 995, 1129, 1361
Delaunay triangulations, 863
Departure point determination, 121
Detached eddy simulation, 721
Deterministic approach, 1019
Diffuser, 1147
Direct numerical simulation (DNS), 925, 1115, 1245, 1369
Discontinuity, 233
Discontinuous finite elements, 887
Discrete adjoint, 939, 1277
Dissipation anisotropy, 1053
Domain decomposition, 1237, 1301
Domain decomposition method, 185
Domain integral, 19
Drag crisis, 75
Driven cavity flow, 185
Dynamic contact lines, 1353

Eady model, 1003
Edge-tracked interface locator technique, 451
Eigenmodes, 849
Elastohydrodynamic lubrication, 1069
Elliptic, 1213
ElsA solver, 367
Energy dissipation, 911
Enhanced discretization and solution techniques, 633
Entropic redundant variables, 947
Equations, 987
Error estimates, 1285
Euler equations, 1027
Experiment, 543
Extraction system, 1137

FAS multigrid, 1123
Feedback, 543
Finite difference, 817, 1213
Finite difference method, 1157, 1469
Finite difference methods for fluids, 789
Finite difference simulation, 739
Finite element computation, 451
Finite element method (FEM), 561, 1077, 1123, 1277, 1285, 1353, 1375
Finite elements, 1, 471, 995, 1197, 1393, 1451
Finite volume methods, 1293, 1375
Finite-volume evolution Galerkin schemes, 1165

Fish, 655
Flow control, 1411
Flow past bluff body, 979
Flow rate boundary conditions, 803
Flow simulation, 619, 633
Fluctuation splitting schemes, 679
Fluid–structure interactions, 619, 1189
Flux limiters, 1197
Flux-limiting, 1043
Fountain flow, 1115
Fractional step Runge–Kutta method, 1237
Free surface, 139, 995, 1027
Free-surface flow, 1353
Friction, 1069

Gas–gas jet, 1011
Gauss–Newton, 1129
General boundary element method, 185
Generalized Gal–Chen and Somerville coordinate transformation, 1369
Generalized Stokes problem, 1411
Geophysical turbulence, 789
Ghost fluid, 833
GIS, 575
GMRES, 1189
Gravity current, 1221
Gravity-driven flows, 1221

Hamiltonian, 1361
Helmholtz decomposition, 491
High MR, 161
High order, 1157, 1253
High resolution, 1085
High-resolution finite volume scheme, 1061
High-resolution methods, 963, 971
High-resolution schemes, 1197
High-Reynolds-number model, 1323
Hill channel, 1101
Hybrid grid, 931
Hybrid mesh, 1181
Hybrid methods, 721
Hydrodynamics, 887
Hyperbolic conservation laws, 1375
Hyperbolic problems, 679
Hyperbolic reconstruction, 1061

Icosahedral grid, 863
IFP-C3D RANS code, 1011
ILU preconditioning, 1301
Image-based simulation, 603
Implicit Large Eddy Simulation (ILES), 1221, 1043
Implicit method, 1107
Implicit time integration methods, 857
Implicit turbulence modelling, 1173
Incompressible, 339
Incompressible flows, 201, 707, 963
Incompressible Navier–Stokes, 773
Inflow generation, 1115
Instabilities, 963
Interface, 233
Interface capturing, 1337
Internal recirculation zone, 99
Inverse design, 1383
Iterative methods, 633
Iterative solution, 1157
Iterative solvers, 857

Jet flow, 1115

Karman vortex street, 543
k–ε model, 1323

Lagrange multipliers, 803
Large-eddy simulation, 99, 561, 721, 789, 911, 971, 1093
Large-scale inverse problems, 759
LDFSS, 931
Leading edge cut, 1
Level-set, 339, 1393
Line-search, 895
Liquid/particle interactions, 1245
Liquid–solid two-phase flow, 561
Local multigrid, 367
Low diffusion, 253
Low dimensional dynamical systems, 1115

Mach-uniform, 1205
Mass transport, 1345
Matching, non-matching and overlapping grids, 1261
Material interface, 833
Medical application, 591
Mesh adaptivity, 789, 1123
Mesh generation, 575
Mesh-free, 655
Mesh-less methods, 139, 387
Meshless CFD, 841
Micro bubble, 591
Micro–macro model, 1019
Midlatitude flow, 1003
MILES, 1043
Mixed finite elements, 955
Mobile-bed flows, 1269
Monotonic, 1043
Monotonicity preserving, 1253
Morphodynamic modelling, 1085
Moving boundaries, 1077
Moving finite elements, 1329
Moving finite volumes, 833
Moving interfaces, 451
Moving meshes, 1077, 1329, 1375, 1393
Multi-level iteration techniques, 633
Multi-phase, 339
Multiblock, 1261
Multigrid, 1383
Multigrid acceleration, 517
Multigrid methods, 879
Multiphase flows, 1245
Multipoint constraint, 471
Multiscale computation, 707

Natural convection, 773
Navier–Stokes, 339, 1245, 1261, 1277
Navier–Stokes equations, 19, 185, 1301, 1469
Near-wall turbulence, 325
Nearly incompressible assumption, 1101
Newton solver, 1315
Newton–Krylov method, 1189
Non-adiabatic, 1205
Non-equilibrium flow, 325
Non-linear acoustics, 591
Non-linear simulation, 161
Non-oscillatory, 1253
Non-strictly hyperbolic non-conservative system, 825
Nonlinear dynamical systems, 759
Nonlinear least squares, 759
Nonoscillatory advection schemes, 1293
Nonoscillatory methods, 1173
Nozzle, 1147
Numerical, 1147
Numerical analysis, 1431
Numerical experiment, 1137

Numerical flux function, 987
Numerical heat transfer, 561
Numerical methods, 1035
Numerical realization, 543
Numerical simulation, 543

Observer, 543
Offline–online procedures, 773
Optimal control, 1411
Optimal control problems, 879
Optimal growth structures, 1003
Optimization, 1383
Orographic wind flow and rainfall, 575
Output bounds, 773

Parabolized Navier–Stokes (PNS), 45, 1315
Parachute aerodynamics, 619
Parafoil, 1
Parallel computing, 185
Parametric study, 1137
Parametrized partial differential equations (PDEs), 773, 1411
Partial differential equations, 1329
Particle methods, 693
PC cluster, 575
Penalty method, 1245
Petroleum reservoir, 955
PIV, 603
Polynomial interpolation, 1261
Porous media, 707, 739, 955
Powder injection, 1147
Preconditioner, 1277
Preconditioning, 963, 1213
Pressure gradient, 925
Pressure-correction, 1205
Projection method, 1393

QBO, 1369
Quadtree grid, 871
Quasi-bubble function, 1451

r-adaptive mesh, 1329
Radial basis functions, 387, 1269
Ram-air parachutes, 1
RANS models, 721
Reaction–convection–diffusion processes, 201
Real gas, 931
Rearrangements, 1345
Reconstruction, 947
Reduced basis methods, 1411
Reduced-basis, 773
Refinement, 1285
Residual smoothing, 895
Residual-distribution schemes, 679
Residual-free bubbles, 1307
Reuse of Krylov vectors, 1189
Riemann problem, 825
Riemann solvers, 139, 253, 903

SARS virus cleaner, 1137
Scalar dissipation, 911
Scalar flux, 911
Scale invariance, 1077
Secondary flow, 603
Second moment closure, 1053
Second-order time discretization, 1181
Sediment transport, 1085
Segregated methods, 271
Semi-geostrophic equations, 1345
Semi-implicit, 817
Semi-implicit methods, 863
Semi-Lagrangian advection, 121
Semi-Lagrangian method, 1269
Semi-Lagrangian schemes, 655
Sensitivity analysis, 1027
Shallow water, 139, 817
Shallow water equations, 825, 863, 871, 1085, 1165, 1269, 1451
Shape design, 1411
Shear layer instability, 75
Shishkin mesh, 1237
Shock-capturing schemes, 903
Singular vectors, 759, 1003
Singularity, 1285
Singularly perturbed problem, 1237
Sliding mesh, 471
Small perturbations, 1411
Smoothed particle hydrodynamics (SPH), 139, 1403
Soft landing, 619
Solitary internal wave, 233
Space–time finite elements, 1093
Stability, 1229
Stabilized finite element methods, 271, 575
Staggered grids, 817, 1469
Stochastic approach, 1019
Stokes equations, 1301
Stone-skipping, 655
Streamlines, 739
Stress tensor, 1245
Structured grids, 367
Subgrid-scale modelling, 911
Subiteration, 1189
Successive update method, 633
Supersonic, 1147
Supersonic flows, 903
Surface tension, 1353
Swirl, 1053
Swirling flow, 99
Symmetry-preserving discretization, 979

TAF, 939
TAMC, 939
Tank experiments, 1369
Tapenade, 939
TDMA, 1469
Test cases, 825
Thermometrics, 955
Tikhonov regularization, 759
Time of flight, 739
Timestep selection, 201
Transonic flow, 517
Triage ward, 1137
Tropical dynamics, 1345
Truly multi-dimensional finite-volume methods, 1165
Turbulence, 721, 971, 1043, 1323
Turbulence modelling, 911
Turbulent, 925
Turbulent flows, 1, 1431
Two tandem circular cylinder, 423
Two-body, 1361
Two-fluid flows, 1393
Two-layer incompressible fluids, 233

Ultrasound, 591
Unsteady, 925
Unsteady compressible viscous flow, 1107
Unsteady flows, 1, 75, 423, 857
Unstructured, 895
Unstructured adaptive mesh, 995
Unstructured grid, 233, 423
Unstructured meshes, 679, 1293
Unstructured moving grids, 1107
Upscaling, 707
Upwind scheme, 253

Variable segregation, 1301
Variance reduction, 1019

Variational data assimilation, 759
Variational multiscale, 1093
Velocity–vorticity formulation, 1469
Venturi, 1147
Vertex elimination algorithm, 1315
Viscous and inviscid transonic flows, 491
Viscous fingering, 161
Viscous flow, 19
Viscous flow simulation, 387
Viscous vortex interactions, 841
Volume-of-fluid, 339
Vortex breakdown, 99
Vortex method, 387, 841
Vortex shedding, 1, 75

CONTENTS

Volume 47, Issue Nos. 1–12 (2005)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 January

Effect of leading edge cut on the aerodynamics of ram-air parachutes: R. Balaji, S. Mittal and A. K. Rai 1

A promising boundary element formulation for three-dimensional viscous flow: X.-W. Gao 19

A posteriori pointwise error estimation for compressible fluid flows using adjoint parameters and Lagrange remainder: A. K. Alekseev and I. M. Navon 45

Flow past a cylinder: shear layer instability and drag crisis: S. P. Singh and S. Mittal . . 75

Issue No. 2, 20 January

Large eddy simulations of turbulent swirling flows in a dump combustor: a sensitivity study: P. Wang and X. S. Bai 99

Semi-analytical method for departure point determination: N. Martin and S. M. Gorelick 121

A stabilized SPH method for inviscid shallow water flows: R. Ata and A. Soulaïmani . . 139

Fully implicit finite difference pseudo-spectral method for simulating high mobility-ratio miscible displacements: M. N. Islam and J. Azaiez 161

Issue No. 3, 30 January

Solving high Reynolds-number viscous flows by the general BEM and domain decomposition method: Y. Wu and S. Liao 185

Control strategies for timestep selection in finite element simulation of incompressible flows and coupled reaction–convection–diffusion processes: A. M. P. Valli, G. F. Carey and A. L. G. A. Coutinho 201

Internal wave computations using the ghost fluid method on unstructured grids: S. Shin 233

Calculations of 3D compressible flows using an efficient low diffusion upwind scheme: Z. Hu and G. Zha 253

Issue No. 4, 10 February

A segregated method for compressible flow computation Part I: isothermal compressible flows: G. Hauke, A. Landaberea, I. Garmendia and J. Canales 271

Low Reynolds number k–ε model for near-wall flow: M. M. Rahman and T. Siikonen 325

A mass-conserving Level-Set method for modelling of multi-phase flows: S. P. van der Pijl, A. Segal, C. Vuik and P. Wesseling 339

Issue No. 5, 20 February

Obituary for Jean Donea: A. Huerta 363

A multigrid adaptive mesh refinement strategy for 3D aerodynamic design: J.-C. Jouhaud, M. Montagnac and L. Tourrette 367

Advances in viscous vortex methods—meshless spatial adaption based on radial basis function interpolation: L. A. Barba, A. Leonard and C. B. Allen 387

Numerical predictions of low Reynolds number flows over two tandem circular cylinders: B. Sharman, F. S. Lien, L. Davidson and C. Norberg 423

Issue No. 6–7, 28 February–10 March

Special Issue:
Advances and Challenges in Flow Simulation and Modelling
Guest Editors: Tayfun E. Tezduyar and Mohamed Hafez

Preface: T. E. Tezduyar and M. Hafez 449

Moving-interface computations with the edge-tracked interface locator technique (ETILT): M. A. Cruchaga, D. J. Celentano and T. E. Tezduyar 451

Multipoint constraint methods for moving body and non-contiguous mesh simulations: D. K. Gartling 471

Numerical simulations of transonic aerodynamic flows based on a hierarchical formulation: M. Hafez and E. Wahba 491

Multigrid acceleration for transonic aerodynamic flow simulations based on a hierarchical formulation: M. Hafez and E. Wahba 517

Numerical realization for analysis of real flows by integrating computation and measurement: T. Hayase, K. Nisugi and A. Shirai 543

Advanced numerical simulation of heat transfer problems: M. Ikegawa, M. Kaiho and A. Hayasaka 561

Parallel finite element simulation for orographic wind flow and rainfall using GIS data: K. Kashiyama, T. Shimizu, T. Kurahashi and H. Hamada 575

Behaviour of a bubble cluster in an ultrasound field: Y. Matsumoto and S. Yoshizawa . 591

Modelling of inflow boundary conditions for image-based simulation of cerebrovascular flow: M. Oshima, H. Sakai and R. Torii 603

Fluid–structure interaction modelling of parachute soft-landing dynamics: K. Stein, T. E. Tezduyar, S. Sathe, R. Benney and R. Charles 619

Enhanced-discretization successive update method (EDSUM): T. E. Tezduyar and S. Sathe 633

Challenge of CIP as a universal solver for solid, liquid and gas: T. Yabe, K. Takizawa, M. Chino, M. Imai and C. C. Chu 655

Issue No. 8–9, 20–30 March

Special Issue:
8th ICFD Conference on Numerical Methods for Fluid Dynamics: Part 1

Preface: M. Baines 677

Invited Papers

Towards very high-order accurate schemes for unsteady convection problems on unstructured meshes: R. Abgrall, N. Andrianov and M. Mezine 679

Particle methods: J. U. Brackbill 693

Multiscale modelling and computation of fluid flow: T. Y. Hou 707

The challenge of turbulence modelling in modern aeronautical design: A. G. Hutton and R. M. Ashworth 721

A predictor–corrector formulation for rigorous streamline simulation: M. J. King, I. Osako and A. Datta-Gupta 739

Very large inverse problems in atmosphere and ocean modelling: C. Johnson, N. K. Nichols and B. J. Hoskins 759

Certified real-time solution of the parametrized steady incompressible Navier–Stokes equations: rigorous reduced-basis *a posteriori* error bounds: K. Veroy and A. T. Patera 773

Towards mesh adaptivity for geophysical turbulence: continuous mapping approach: P. K. Smolarkiewicz and J. M. Prusa 789

Flow rate defective boundary conditions in haemodynamics simulations: A. Veneziani and C. Vergara 803

Accepted Papers

A high resolution scheme for flows in open channels with arbitrary cross-section: E. Aldrighetti and P. Zanolli 817

Performance of numerical methods on the non-unique solution to the Riemann problem for the shallow water equations: N. Andrianov 825

A ghost fluid, moving finite volume plus continuous remap method for compressible Euler flow: D. A. Bailey, P. K. Sweby and P. Glaister 833

Vortex method with meshless spatial adaption for accurate simulation of viscous, unsteady vortical flows: L. A. Barba, A. Leonard and C. B. Allen 841

Numerical assessment of thermo-acoustic instabilities in gas turbines: L. Benoit and F. Nicoud 849

Iterative solution techniques for unsteady flow computations using higher order time integration schemes: H. Bijl and M. H. Carpenter 857

A semi-implicit method conserving mass and potential vorticity for the shallow water equations on the sphere: L. Bonaventura, L. Kornblueh, T. Heinze and P. Ripodas .. 863

Chaotic mixing in a basin due to a sinusoidal wind field: Q. Liang, A. G. L. Borthwick and P. H. Taylor 871

Experiences with a space–time multigrid method for the optimal control of a chemical turbulence model: A. Borzì and R. Griesse 879

On using discontinuous finite element methods to simulate inertial confinement fusion: A. Burbeau-Augoula 887

Upwinding and implicit residual smoothing on cell-vertex unstructured grids: L. A. Catalano and V. S. E. Daloiso 895

Shock wave numerical structure and the carbuncle phenomenon: Y. Chauvat, J.-M. Moschetta and J. Gressier 903

Dynamic structure subgrid-scale models for large eddy simulation: S. G. Chumakov and C. J. Rutland 911

Unsteady turbulent flow with sudden pressure gradient changes: Y. M. Chung 925

Development of a CFD real gas flow solver for hybrid grid: M. Cirri, P. Adami and F. Martelli 931

On the performance of discrete adjoint CFD codes using automatic differentiation: J.-D. Müller and P. Cusdin 939

On numerical flux evaluation using coupled reconstruction based on entropic redundant variables: G. de Felice, G. Mazzotti and C. Meola 947

Numerical modelling of flow with heat transfer in petroleum reservoirs: M. Amara, D. Capatina, B. Denel and P. Terpolilli 955

Effects of preconditioning on the accuracy and efficiency of incompressible flows: S. Patel and D. Drikakis 963

Large eddy simulation of compressible turbulence using high-resolution methods: M. Hahn and D. Drikakis 971

A new symmetry-preserving Cartesian-grid method for computing flow past arbitrarily shaped objects: M. Dröge and R. Verstappen 979

On the adjoint solution of the quasi-1D Euler equations: the effect of boundary conditions and the numerical flux function: G. F. Duivesteijn, H. Bijl, B. Koren and E. H. van Brummelen 987

An adaptive mesh adjoint data assimilation method applied to free surface flows: F. Fang, C. C. Pain, M. D. Piggott, G. J. Gorman and A. J. H. Goddard 995

Structure and evolution of singular vectors in the Eady model: T. H. A. Frame, N. K. Nichols and A. J. Thorpe 1003

Numerical simulation of an experimental gas–gas jet generated by single-hole diesel-like injection: O. El Ganaoui, C. Habchi, G. Bruneaux and I. Danaila 1011

Numerical simulation of a micro–macro model of *concentrated suspensions*: Y. Gati 1019

Adjoint sensitivity analysis for fluid flow with free surface: I. Y. Gejadze and G. J. M. Copeland 1027

Issue No. 10–11, 10–20 April

Special Issue:
8th ICFD Conference on Numerical Methods for Fluid Dynamics: Part 2
Accepted Papers (*continued from Vol. 47 Iss. 8–9*)

A method of coupling non-linear hyperbolic systems: examples in CFD and plasma physics: E. Godlewski and P. A. Raviart 1035

On MILES based on flux-limiting algorithms: F. F. Grinstein, C. Fureby and C. R. DeVore . . . 1043

Anisotropic, isothermal, turbulent swirling flow in a complex combustor geometry: L. N. Jones, P. H. Gaskell, H. M. Thompson, X. J. Gu and D. R. Emerson 1053

High-resolution simulation of inviscid flow in general domains: O. Hall, H. J. Schroll and F. Svensson 1061

Adjoint error estimation for EHL-like models: D. E. Hart, C. E. Goodyer, M. Berzins, P. K. Jimack and L. E. Scales 1069

A moving mesh finite element algorithm for fluid flow problems with moving boundaries: M. J. Baines, M. E. Hubbard and P. K. Jimack 1077

A high-resolution scheme for the equations governing 2D bed-load sediment transport: J. Hudson and P. K. Sweby 1085

Implicit subgrid-scale models in space–time variational-multiscale discretizations: S. J. Hulshoff 1093

Incompressible separated flows simulations with the smoothed particle hydrodynamics gridless method: R. Issa, E. S. Lee, D. Violeau and D. R. Laurence 1101

Unstructured moving grids for implicit calculation of unsteady compressible viscous flows: A. Jahangirian and M. Hadidoolabi 1107

Reduced basis simulations as a tool for generating turbulent inlet-data for two opposing jets: P. S. Johansson and H. I. Andersson 1115

An adaptive multigrid tool for elliptic and parabolic systems: A. C. Jones and P. K. Jimack 1123

Approximate iterative methods for variational data assimilation: A. S. Lawless, S. Gratton and N. K. Nichols 1129

A preliminary parametric study on performance of SARS virus cleaner using CFD simulation: W. Z. Lu, A. Y. T. Leung, S. H. Yan and A. T. P. So 1137

Prediction of jet flows in the supersonic nozzle and diffuser: Y. Liu and B. J. Bellhouse 1147

Splitting methods for high order solution of the incompressible Navier–Stokes equations in 3D: A. Brüger, B. Gustafsson, P. Lötstedt and J. Nilsson 1157

Well-balanced finite volume evolution Galerkin methods for the shallow water equations with source terms: M. Lukáčová-Medvid'ová and Z. Vlk 1165

The design and construction of implicit LES models: L. G. Margolin and W. J. Rider .. 1173

A high-order TVD transport method for hybrid meshes on complex geological geometry: S. K. Matthäi, A. A. Mezentsev, C. C. Pain and M. D. Eaton 1181

An interface Newton–Krylov solver for fluid–structure interaction: C. Michler, E. H. van Brummelen and R. de Borst 1189

Implicit finite element discretizations based on the flux-corrected transport algorithm: M. Möller, D. Kuzmin and S. Turek 1197

A pressure-correction algorithm with Mach-uniform efficiency and accuracy: K. Nerinckx, J. Vierendeels and E. Dick 1205

Preconditioners for inhomogeneous anisotropic problems in spherical geometry: D. E. Brown, N. K. Nichols and M. J. Bell 1213

Numerical modelling of two-dimensional and axisymmetric gravity currents: M. D. Patterson, J. E. Simpson, S. B. Dalziel and N. Nikiforakis 1221

BiGlobal stability analysis of steady flow in constricted channel geometries: R. E. Pitt, S. J. Sherwin and V. Theofilis 1229

Special meshes and domain decomposition methods for evolutionary convection–diffusion–reaction problems: L. Portero and J. C. Jorge 1237

Numerical modelling of solid particle motion using a new penalty method: T. N. Randrianarivelo, G. Pianet, S. Vincent and J. P. Caltagirone 1245

Combining high-order accuracy with non-oscillatory methods through monotonicity preservation: W. J. Rider, J. A. Greenough and J. R. Kamm 1253

An implicit multiblock coupling for the incompressible Navier–Stokes equations: C. Romé and S. Glockner 1261

High order interpolation methods for semi-Lagrangian models of mobile-bed hydrodynamics on Cartesian grids with cut cells: G. Rosatti, R. Chemotti and L. Bonaventura 1269

Efficient preconditioning of the discrete adjoint equations for the incompressible Navier–Stokes equations: R. Schneider and P. K. Jimack 1277

Precise FEM solution of a corner singularity using an adjusted mesh: P. Burda, J. Novotný and J. Šístek 1285

Multidimensional positive definite advection transport algorithm (MPDATA): an edge-based unstructured-data formulation: P. K. Smolarkiewicz and J. Szmelter ... 1293

Parallel ILU preconditioning and parallel mesh adaptation with load balancing for general domain decompositions for the Navier–Stokes equations: Ø. Staff and S. Ø. Wille ... 1301

Enhanced residual-free bubble method for convection–diffusion problems: A. Cangiani and E. Süli ... 1307

Elimination AD applied to Jacobian assembly for an implicit compressible CFD solver: M. Tadjouddine, S. A. Forth and N. Qin ... 1315

Generalized wall functions and their application for simulation of turbulent flows: S. V. Utyuzhnikov ... 1323

String gradient weighted moving finite elements: A. Wacher, I. Sobey and K. Miller ... 1329

A fully conservative model for compressible two-fluid flow: J. Wackers and B. Koren .. 1337

Modelling the response of the atmosphere to equatorial forcing: M. A. Wakefield and M. J. P. Cullen ... 1345

Finite element simulation of three-dimensional free-surface flow problems with dynamic contact lines: M. A. Walkley, P. H. Gaskell, P. K. Jimack, M. A. Kelmanson and J. L. Summers ... 1353

Variational data assimilation for Hamiltonian problems: L. R. Watkinson, A. S. Lawless, N. K. Nichols and I. Roulstone ... 1361

Laboratory for internal gravity-wave dynamics: the numerical equivalent to the quasi-biennial oscillation (QBO) analogue: N. P. Wedi and P. K. Smolarkiewicz ... 1369

Generation of Arbitary Lagrangian–Eulerian (ALE) velocities, based on monitor functions, for the solution of compressible fluid equations: B. V. Wells, M. J. Baines and P. Glaister 1375

Bill Morton Prize Papers

Progressive optimization on unstructured grids using multigrid-aided finite-difference sensitivities: L. A. Catalano, A. Dadone and V. S. E. Daloiso ... 1383

A Lagrangian level-set approach for the simulation of incompressible two-fluid flows: F. S. Sousa and N. Mangiavacchi ... 1393

Adaptive particle distribution for Smoothed Particle Hydrodynamics: M. Lastiwka, N. Quinlan and M. Basa ... 1403

On optimization, control and shape design of an arterial bypass: G. Rozza ... 1411

Issue No. 12, 30 April

Obituary for Joel Ferziger: J. Kim, J. R. Koseff, A. Leonard and R. L. Street ... 1421

A complete boundary integral formulation for compressible Navier–Stokes equations: Y. Zuosheng ... 1423

Numerical analysis of developing turbulent flow in a 180° bend tube by an algebraic Reynolds stress model: H. Sugiyama and D. Hitomi ... 1431

Discontinuous boundary implementation for the shallow water equations: S. Bunya, J. J. Westerink and S. Yoshimura 1451

Numerical solution of three-dimensional velocity–vorticity Navier–Stokes equations by finite difference method: D. C. Lo, K. Murugesan and D. L. Young 1469
